

1 BEFORE PLUGGING

Hold headset before fitting

Hold with your thumb and first two fingers, the Soft Spring upward and the speaker outlet pointing toward your ear.

2

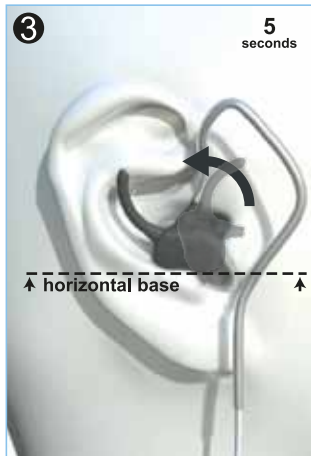

Compress foam tip

Roll and compress the tip as small as possible: the cylinder should be free from wrinkles.

3

5 seconds

Place headset in ear

Insert the headset fully into your ear, while twisting it backwards. The base has to be horizontal.

4

5 seconds

Push headset fully into ear

Pull your ear back and push the headset further into the ear canal. The BCM should not be visible once inserted.

5

20 seconds

Hold headset in ear

Hold headset in your ear for 20 seconds until the foam has fully expanded.

6

Place Soft Spring in ear

Push the Soft Spring into the upper bend of your ear to ensure a secure headset fit and consistent pressure on the BCM.

7

Place Cable Retainer behind ear

Place the Cable Retainer behind your ear to ensure the cable is held comfortably and securely over the ear.

8

Plug and test headset on radio

Test your voice quality : if signal is low or the headset is sitting loose, refit the headset and/or try another foam tip size.
